

Alperen Saffet Yeşil

.Net Developer

I completed my first university in my academic life by studying Physiotherapy and Rehabilitation at the Eastern Mediterranean University, and after my education here, I entered the job search process in many hospitals and the approaches that I came across during my job search processes such as we want female personnel cooled my view of this profession. I worked as a computer sales specialist and computer installer at itopya.com, I worked in my job for about 4 months and then I left itopya.com to work with Cihan (Mezarci) Cavlak, whom I met while I was working, and during my job here I was an editor on Youtube and Live broadcast channels. . Afterwards, I had to quit my job, thinking that the job of the video montage was uneven and I could not make a living from such a job in my future. On this path, which I started by saying how to train myself on software, I made improvements on C#, .Net, JavaScript, HTML/CSS at Patika, Udemy and a paid course Siliconmade Academy. I got Project management certificates for Project Management at Google Game and Application academy. Myself JR. I see it as a .Net Developer

Experience

2022-06 - Current

RB Mode, Istanbul

.Net Developer

I created .Net 5 API server for the mobile project. During this project i used JWT token for API security. I wrote 25 APIs for mobile. I wrote 5 screens for mobile screens in Flutter. I have completed the responses of the api's I have written here. More than one team was assigned to each user in the web project. Each teams has their own todo list. This system has been established for the job follow-up of the employees. We use DevExpress for Web Project. For this project we use Model and API and then in project pages set authorization for user.
